

EASA	AIRWORTHINESS DIRECTIVE
	<p>AD No.: 2014-0275</p> <p>Date: 19 December 2014</p> <p>Note: This Airworthiness Directive (AD) is issued by EASA, acting in accordance with Regulation (EC) No 216/2008 on behalf of the European Community, its Member States and of the European third countries that participate in the activities of EASA under Article 66 of that Regulation.</p>
<p>This AD is issued in accordance with EU 748/2012, Part 21.A.3B. In accordance with EU 1321/2014 Annex I, Part M.A.301, the continuing airworthiness of an aircraft shall be ensured by accomplishing any applicable ADs. Consequently, no person may operate an aircraft to which an AD applies, except in accordance with the requirements of that AD, unless otherwise specified by the Agency [EU 1321/2014 Annex I, Part M.A.303] or agreed with the Authority of the State of Registry [EC 216/2008, Article 14(4) exemption].</p>	
Design Approval Holder's Name : AIRBUS	Type/Model designation(s) : A318, A319, A320 and A321 aeroplanes
TCDS Number :	EASA.A.064
Foreign AD :	Not applicable
Supersedure:	None
ATA 35	Oxygen – Passenger Chemical Oxygen Generators – Replacement
Manufacturer(s):	Airbus (formerly Airbus Industrie)
Applicability:	Airbus A318-111, A318-112, A318-121, A318-122, A319-111, A319-112, A319-113, A319-114, A319-115, A319-131, A319-132, A319-133, A320-211, A320-212, A320-214, A320-215, A320-216, A320-231, A320-232, A320-233, A321-111, A321-112, A321-131, A321-211, A321-212, A321-213, A321-231 and A321-232 aeroplanes, all manufacturer serial numbers (MSN).
Reason:	<p>Reports have been received indicating premature ageing of certain passenger chemical oxygen generators, Part Number (P/N) 117042-XX, manufactured by B/E Aerospace. Some operators reported that when they tried to activate generators, some older units failed to activate. Given the number of failed units reported, all the generators manufactured in 1999, 2000 and 2001 must be considered unreliable.</p> <p>This condition, if not corrected, could lead to failure of the generator to activate and consequently not deliver oxygen during an emergency, possibly resulting in injury to passengers.</p> <p>To address this potential unsafe condition, Airbus issued Alert Operators Transmission (AOT) A35N006-14, making reference to B/E Aerospace Service Information Letter (SIL) D1019-01 (currently at Revision 1) and B/E Aerospace Service Bulletin (SB) 117042-35-001.</p> <p>For the reason described above, this AD requires identification and replacement of the affected oxygen generators. Pending the on-going investigation, this AD is considered to be an interim action and further AD action may follow.</p>
Effective Date:	24 December 2014

<p>Required Action(s) and Compliance Time(s):</p>	<p>Required as indicated, unless accomplished previously:</p> <p>(1) Within 30 days after the effective date of this AD, identify the date of manufacture (see Appendix 1 of this AD where this is located) of each passenger oxygen generator, having a P/N as listed in Table 1 of this AD, in accordance with the instructions of Airbus AOT A35N006-14.</p> <p>A review of aeroplane maintenance records is acceptable to make this identification, provided those records can be relied upon for the purpose of this requirement.</p> <p>(2) Within the compliance time specified in Table 1 of this AD, as applicable, remove and replace each affected passenger oxygen generator from service in accordance with the instructions of Airbus AOT A35N006-14 and/or, for 15 min generators, in accordance with the instructions of B/E Aerospace SB 117042-35-001.</p> <p>B/E Aerospace SIL D1019-01 Revision 1 provides instructions for the activation and the disposal of a removed passenger oxygen generator. Airbus AOT A35N006-14 (Appendix 1) includes instructions for reporting the results of the activation (including no findings) of removed units. The data gathered from those results will be analysed to determine further action(s), if any.</p> <p style="text-align: center;">Table 1 – Replacement of Passenger Oxygen Generators</p> <table border="1" data-bbox="549 891 1444 1451"> <thead> <tr> <th>P/N</th><th>Compliance Time</th></tr> </thead> <tbody> <tr> <td rowspan="5"> 117042-02 (15 min – 2 masks) 117042-03 (15 min – 3 masks) 117042-04 (15 min – 4 masks) 117042-22 (22 min – 2 masks) 117042-23 (22 min – 3 masks) 117042-24 (22 min – 4 masks) </td><td>For units manufactured in 1999, before exceeding 15 years since date of manufacture, or within 30 days after the effective date of this AD, whichever occurs later</td></tr> <tr> <td>For units manufactured in 2000, before exceeding 14,5 years since date of manufacture, or within 6 months after the effective date of this AD, whichever occurs later</td></tr> <tr> <td>For units manufactured in 2001, before exceeding 14 years since date of manufacture, or within 12 months after the effective date of this AD, whichever occurs later</td></tr> <tr> <td></td></tr> <tr> <td></td></tr> </tbody> </table> <p>(3) From the effective date of this AD, it is allowed to install on any aeroplane a passenger oxygen generator with a P/N as listed in Table 1 of this AD, provided that the passenger oxygen generator has a manufacturing date of 2005 or later.</p>	P/N	Compliance Time	117042-02 (15 min – 2 masks) 117042-03 (15 min – 3 masks) 117042-04 (15 min – 4 masks) 117042-22 (22 min – 2 masks) 117042-23 (22 min – 3 masks) 117042-24 (22 min – 4 masks)	For units manufactured in 1999, before exceeding 15 years since date of manufacture, or within 30 days after the effective date of this AD, whichever occurs later	For units manufactured in 2000, before exceeding 14,5 years since date of manufacture, or within 6 months after the effective date of this AD, whichever occurs later	For units manufactured in 2001, before exceeding 14 years since date of manufacture, or within 12 months after the effective date of this AD, whichever occurs later
