EASA AD No.: 2015-0059

EASA

AIRWORTHINESS DIRECTIVE

AD No.: 2015-0059

Date: 07 April 2015

Note: This Airworthiness Directive (AD) is issued by EASA, acting in accordance with Regulation (EC) No 216/2008 on behalf of the European Community, its Member States and of the European third countries that participate in the activities of EASA under Article 66 of that Regulation.

This AD is issued in accordance with EU 748/2012, Part 21.A.3B. In accordance with EU 1321/2014 Annex I, Part M.A.301, the continuing airworthiness of an aircraft shall be ensured by accomplishing any applicable ADs. Consequently, no person may operate an aircraft to which an AD applies, except in accordance with the requirements of that AD, unless otherwise specified by the Agency [EU 1321/2014 Annex I, Part M.A.303] or agreed with the Authority of the State of Registry [EC 216/2008, Article 14(4) exemption].

Design Approval TURBOMECA	Holder's Name:	Type/Model designation(s): RTM 322 engines	
TCDS Number:	EASA.E.009		
Foreign AD:	Not applicable		
Supersedure:	None		
ATA 75 Air – Inlet Guide Vane / Variable Stator Vane Actuator / Clevis Pin – Inspection / Re-Installation			
Manufacturer(s):	Turboméca, S.A.		
Applicability:		22-01/9A engines, all serial numbers. to be installed on, but not limited to, NH Industries	
Reason:	Recent in-service events were reported where the clevis pin was found missing or loosened within the engine compartment deck. The clevis pin secures connection of the Inlet Guide Vane (IGV) actuator piston to the IGV drive mechanism. For all events, the clevis pin was installed from rear to front, with the spring clip in internal position when locked, in accordance with the instructions of the engine maintenance manual. Analysis showed that, these installation instructions may lead (when the spring clip is distorted) to an interference between the spring clip and the control lever which leads to open/release the spring clip, and subsequently loose the clevis pin.		
	performance, compressor s	ed and corrected, may lead to loss of engine surge and potentially to loss of power or an In-Flighting in an emergency landing.	
	Service Bulletin (MSB) MSE inspect the clevis pin and in those currently available in	nsafe condition, Turboméca published Mandatory BP-M3-A-75-31-10-05A-A-A, to provide instructions to installation instructions of the clevis pin, which replace the engine maintenance manual. These new clevis spring clip is in the external position, thereby he control lever.	

EASA AD No.: 2015-0059

	This AD also addresses another type of clevis pin event where the clevis pin was found partially disassembled, and may also cause clevis pin detachment. This loss of the hinge pin was due to a non-compliance in crimping process, for which Turboméca issued Recommended Service Bulletin SBP-M3-A-75-31-10-03A-A-A issue 1. The instructions of Turboméca MSBP-M3-A-75-31-10-05A-A-A now also cover the instructions of the Recommended SBP-M3-A-75-31-10-03A-A-A issue 1. For the reasons described above, this AD requires inspection of clevis pin Part Number (P/N) 0322738070, and, depending on findings, accomplishment of applicable corrective actions. This AD also requires the use of Turboméca MSBP-M3-A-75-31-10-05A-A-A instructions for installation of a clevis pin on an engine.	
Effective Date:	21 April 2015	
Required action(s) and Compliance Time(s):	Required as indicated, unless accomplished previously: Note 1: For the purpose of this AD, the applicable MSB is Turboméca MSB MSBP-M3-A-75-31-10-05A-A-A. (1) Within 90 Engine Hours (EH) after the effective date of this AD, remove and visually inspect the clevis pin P/N 0322738070 (including hinge pin and spring clip) in accordance with the instructions of the applicable MSB.	
	(2) If, during the inspection as required by paragraph (1) of this AD, the clevis pin is found serviceable, as defined in the applicable MSB, before next flight, reinstall it in accordance with the applicable MSB.	
	(3) If, during the inspection as required by paragraph (1) of this AD, the clevis pin is not found serviceable, as defined in the applicable MSB, before next flight, replace it with a serviceable part in accordance with the applicable MSB.	
	(4) From the effective date of this AD, each time a clevis pin P/N 0322738070 is installed on an engine, the installation must be accomplished in accordance with the instructions of the applicable MSB.	
	Note 2: The applicable MSB provides a list of tasks that require removal and reinstallation of the clevis pin.	
	(5) From the effective date of this AD, do not install an engine on a helicopter, unless in compliance with the requirements of this AD.
