EASA PAD No. 20-109

[Published on 09 July 2020 and officially closed for comments on 23 July 2020]

Commenter 1: Emirates – David Castillo – 20/07/2020

Comment # 1

With reference to the attached document, we would like EASA to review and advise if the following timelines mentioned in Page 3 – Reporting – Para 3 of the subject PAD can be revised as follows:

Reporting:

- (3) a) If there is(are) any finding(s): Report the results to Airbus within 10 days.
- b) If there is(are) Nil finding(s) (The ingress rate is equal or lower than 4 ml/month, with no contaminants found during previous or current inspections): Report the results to Airbus within 30 days..

Unfortunately, reporting Nil findings within 10 days of accomplishment creates a big burden to the operator as both the inspection reports and pictures of the oil sample taken are required to be sent to Airbus. In this regard, the change will give us the flexibility to manage the reporting with an adequate time-frame.

EASA response:

Comment agreed. Paragraph (3) of the Final AD has been amended accordingly.
