

Explanatory Statement for Absence of AD document

At this time, there are no Ratier-Figeac FH385 and FH386 series propellers in civil service.

For this reason, no publicly available AD document exists and this AD record (ADR) is created for information only. The content is only made available by EASA to the concerned design approval holder(s) and competent military airworthiness authorities, represented by CQC. The AD content is understood to be a recommendation to the affected military authorities to issue their own AD.

The 'applicable AD' for this subject, containing the legally valid requirements for the military aeroplane(s), is the document issued by the responsible military authority, depending on the country where the affected aeroplane, having FH385 or FH386 propellers installed, is registered.

For a copy of the applicable (military) AD, contact the responsible military authority.

The list of CQC AD recommendations is available [here](#) for download, under EXPERT AREA.
