## EASA

## AIRWORTHINESS DIRECTIVE

AD No.: 2007-0069R1

Date: 25 November 2010

Note: This Airworthiness Directive (AD) is issued by EASA, acting in accordance with Regulation (EC) No 216/2008 on behalf of the European Community, its Member States and of the European third countries that participate in the activities of EASA under Article 66 of that Regulation.

This AD is issued in accordance with EC 1702/2003, Part 21A.3B. In accordance with EC 2042/2003 Annex I, Part M.A.301, the continuing airworthiness of an aircraft shall be ensured by accomplishing any applicable ADs. Consequently, no person may operate an aircraft to which an AD applies, except in accordance with the requirements of that AD, unless otherwise specified by the Agency [EC 2042/2003 Annex I, Part M.A.303] or agreed with the Authority of the State of Registry [EC 216/2008, Article 14(4) exemption].

Type Approval Holder's Name :		Type/Model designation(s):
AIRBUS		A340-200/-300 aeroplanes
TCDS Number :	EASA.A.015	
Foreign AD :	Not applicable	
Revision :	This AD revises EASA A	D 2007-0069 dated 16 March 2007
ATA 32	Landing gear - No - Inspection / Mod	se Wheel Steering System – Rotating Sleev lification
Manufacturer(s):	Airbus (formerly Airbus Industrie)	
Applicability:	Airbus A340 aeroplanes, models -211, -212, -213, -311, -312 and -313, a serial numbers except those having received both Airbus modifications 51381 and 53073 in production or Airbus Service Bulletins (SB) A340-32-4204 and SB A340-32-4227 in service.	
Reason:	An operator of A340 steering (NWS) syste	aeroplane reported a failure of the nose wheel
	Investigations found abnormal wear of the gear teeth of the Rotary Variable Differential Transducer (RVDT) gearbox and the driving gear rir preventing correct operation of the NWS system.	
		aking and extensive corrosion of the nose landing ng barrel was found under the NWS rotating sleeve
		lyses conducted on grease samples showed the significant quantities.
	was caused by the all These metallic partic	teeth of the RVDT gearbox and the driving gear rin brasive effect of metallic particles in the grease. les from corroded areas had been carried by the rmal lubrication of the rotating sleeve.
	This presence of wat gearboxes.	er could freeze the grease and thus jam the
		corrected, could cause the aeroplane to deviate from and/or allow an uncontrolled corrosion propagation of

EASA AD No.: 2007-0069R1

	the main fitting barrel.	
	DGAC France AD F-2001-504 dealing with the same subject was issued to render mandatory inspections for corrosion under nose wheel steering system-rotating sleeve	
	DGAC France AD F-2005-209 superseded the AD F-2001-503 R3 and mandated Airbus SB:	
	<ul> <li>A340-32-4204 associated to Airbus modification 51381 (addition of seal within rotating steering collar)</li> </ul>	
	<ul> <li>A340-32-4227 associated to Airbus modification 53073 (addition of new steering collar and bushes to improve greasing)</li> </ul>	
	EASA AD 2007-0069 at original issue retained the requirements of DGAC France AD F-2005-209 and extended the threshold for embodiment of the final fix to second overhaul under certain conditions.	
	This AD is revised to recognise that accomplishment of the modification in accordance with Airbus A340-32-4277 is an acceptable alternative to the accomplishment of the modification in accordance with Airbus SB A340-32-4227.	
	For aeroplane already compliant with AD F-2005-210, no further action is required by this AD.	
Effective Date:	Revision 1: 09 December 2010	
	Original issue: 30 March 2007	
Required action(s)	Required as indicated:	
and Compliance Time(s):	(1) For aircraft on which Airbus modification 51381 has not been embodied in production or Airbus SB A340-32-4204 in-service	
	Unless already accomplished,	
	<ul> <li>within 5 years following the NLG installation (new or overhauled, if major overhaul already accomplished), or</li> </ul>	
	<ul> <li>within 700 flight hours from October 27, 2001 (effective date of AD 2001-503 at original issue),</li> </ul>	
	whichever occurs later,	
	(1.1) Perform inspection of the grease and the gear teeth of the RVDT gearbox and the driving gear ring and depending on the results, carry out the corrective actions in accordance with the instructions of Airbus SB A340-32-4172 and repeat this inspection at intervals not exceeding 8 months, or	
	(1.2) Perform an inspection of the chrome on the bearing surface of the NLG main fitting barrel under the rotating sleeve, in accordance with the instructions of Airbus SB A340-32-4172 and repeat this inspection at intervals not exceeding 18 months.	
	Note 1: If the last inspection performed is the inspection defined in paragraph (1.1) of this AD then the following inspection is to be carried out within 8 months whatever its type is (inspection of the grease or inspection of the chrome on the bearing surface). If the last inspection performed is the inspection defined in paragraph (1.2) of this AD, then the following inspection is to be carried out within 18 months, whatever its type is (inspection of the grease or inspection of the chrome on the bearing surface).	
	(2) For aircraft on which	
	- Airbus modification 51381 has been embodied in	

EASA Form 110 Page 2/4

production or Airbus SB A340-32-4204 has been embodied in service, and

 Airbus modification 53073 has not been embodied in Production or Airbus SB A340-32-4227 has not been embodied in service

Unless already accomplished, within 5 years following the NLG installation (new or overhauled, if major overhaul already accomplished), or within 5 years from accomplishment of Airbus SB A340-32-4204:

Carry out an inspection of the chrome on the bearing surface in the NLG main fitting barrel under the rotating sleeve in accordance with the instructions of Airbus SB A340-32-4172 and repeat this inspection at intervals not exceeding 18 months.

## (3) Modification

Unless already accomplished, at the effective date of this AD at original issue:

 for NLG's never overhauled, no later than 10 years following NLG first flight, modify the NLG in accordance with instructions of SB A340-32-4204 (Airbus modification 51381 in production) and Airbus SB A340-32-4227 (Airbus modification 53073 in production).

**Note 2:** When the NLG first flight is unknown, use the NLG date of manufacture.

- for NLG's overhauled once:
  - no later than 5 years from the first NLG overhaul, or
  - no later than 10 years since first NLG overhaul, provided that an inspection of the chrome on the bearing surface in the NLG main fitting barrel under the rotating sleeve is/has been performed no later than 5 years since NLG first overhaul, in accordance with instructions of Airbus SB A340-32-4172 and thereafter at intervals not exceeding 18 months.

modify the NLG in accordance with the instructions of Airbus SB A340-32-4204 (Airbus modification 51381 in production) and Airbus SB A340-32-4227 (Airbus modification 53073 in production).

The embodiment of both Airbus SB A340-32-4204 and SB A340-32-4227 or application of Airbus SB A340-32-4227 when Airbus modification 51381 has been embodied in production, cancels the repetitive inspections required by this AD.

## (4) Alternative to Airbus SB A340-32-4227

Modification of an aeroplane in accordance with the instructions of Airbus Service Bulletin A340-32-4277 is recognised as an acceptable alternative to the modification of an aeroplane in accordance with the instructions of Airbus Service Bulletin A340-32-4227 as required by paragraph (3) of this AD.

As a consequence, the embodiment of both Airbus SB A340-32-4204 and SB A340-32-4277 or embodiment of Airbus SB A340-32-4277 when Airbus modification 51381 has been embodied in production, cancel the repetitive inspections required by this AD.
