EASA AD No.: 2012-0191R1

## EASA

## **AIRWORTHINESS DIRECTIVE**

AD No.: 2012-0191R1

Date: 06 November 2012

Note: This Airworthiness Directive (AD) is issued by EASA, acting in accordance with Regulation (EC) No 216/2008 on behalf of the European Community, its Member States and of the European third countries that participate in the activities of EASA under Article 66 of that Regulation.

This AD is issued in accordance with EU 748/2012, Part 21.A.3B. In accordance with EC 2042/2003 Annex I, Part M.A.301, the continuing airworthiness of an aircraft shall be ensured by accomplishing any applicable ADs. Consequently, no person may operate an aircraft to which an AD applies, except in accordance with the requirements of that AD, unless otherwise specified by the Agency [EC 2042/2003 Annex I, Part M.A.303] or agreed with the Authority of the State of Registry [EC 216/2008, Article 14(4) exemption].

## **Design Approval Holder's Name:** Type/Model designation(s): BAE SYSTEMS (OPERATIONS) LTD BAe 146 and AVRO 146-RJ aeroplanes TCDS Number: EASA.A.182 Foreign AD: Not applicable Revision: This AD revises EASA AD 2012-0191 dated 21 September 2012. Time Limits / Maintenance Checks - Nose Landing Gear Main **ATA 05** Fitting Life Limitation – Implementation BAE Systems (Operations) Ltd, British Aerospace plc, British Aerospace Manufacturer(s): (Commercial Aircraft) Ltd, British Aerospace (Operations) Ltd, British Aerospace Regional Aircraft Ltd, British Aerospace Regional Aircraft trading as Avro International Aerospace. BAe 146 and AVRO 146-RJ aeroplanes, all models, all serial numbers. Applicability: Reason: Several occurrences of the aeroplane's Nose Landing Gear (NLG) Main Fitting cracking have been reported. Subsequently in different cases, NLG Main Fitting crack lead to collapsed NLG, locked NLG steering and an aeroplane's un-commanded steering to the left. Cracks in the NLG Bell Housing are not detectable with the NLG fitted to the aeroplane and are difficult to detect during overhaul without substantial disassembly of the gear. This condition, if not corrected, could lead to degradation of directional control on the ground or an un-commanded turn to the left and a consequent loss of control of the aeroplane on the ground, possibly resulting in damage to the aeroplane and injury to occupants. Prompted by these findings, BAE Systems (Operations) Ltd issued Inspection Service Bulletin (ISB) 32-186 (hereafter referred to as the ISB) to introduce a new safe life of 16 000 flight cycles (FC) for certain NLG main fittings, having a Part Number (P/N) as identified in Paragraph 1A, tables 1, 2 and 3 of the ISB. To correct this unsafe condition, EASA issued AD 2012-0191 to require

implementation of the new safe-life limitation for the affected NLG main fittings

EASA AD No.: 2012-0191R1

		and repla	cement of fittings th	nat have already exceeded the new limit.	
		Since that AD was issued, it was found that clarification is necessary regarding the existing NLG main fitting life limits. Consequently, this AD is revised by adding a Note to clarify that the current life limits, as specified in the applicable Aircraft Maintenance Manual (AMM), remain valid and should be applied, pending compliance with this AD.			
	Effective Date:	Revision 1: 20 November 2012			
		Original issue: 05 October 2012			
	Required Action(s) and Compliance Time(s):	Required as indicated, unless accomplished previously:			
		(1) Within the compliance time as specified in Table 1 of this AD, as applicable, and thereafter, at intervals not to exceed 16 000 FC, replace each affected NLG main fitting, having a P/N as identified in Paragraph 1A, tables 1, 2 and 3 of the ISB, in accordance with the accomplishment instruction of the ISB.			
			Table 1 – Replacement thresholds		
		the sin	accumulated by NLG Main Fitting ce first installation an aeroplane	Compliance Time	
			ual to or more n 29 000 FC	Within 12 months after 05 October 2012 [the effective date of the original issue of this AD]	
		tha	ual to or more n 20 000 FC but s than 29 000 FC	Within 24 months after 05 October 2012 [the effective date of the original issue of this AD]	
		tha	ual to or more n 16 000 FC but s than 20 000 FC	Within 36 months after 05 October 2012 [the effective date of the original issue of this AD]	
		Les	ss than 16 000 FC	Before accumulating 16 000 FC or within 36 months after 05 October 2012 [the effective date of the original issue of this AD], whichever occurs later.	
		Note: During the compliance time allowed by this AD, the existing NLG main fitting life limits as specified in the applicable AMM Chapter 5, which is also subject to an EASA AD, are still valid and should not be exceeded.			
		(2) From 05 October 2012 [the effective date of the original issue of this AD], do not install a NLG main fitting, having a P/N as identified in Paragraph 1A, tables 1, 2 and 3 of the ISB, on an aeroplane, unless in compliance with the requirements of this AD.			
			npliance with the requirements of paragraphs (1) and (2) of this AD be demonstrated by:		
		(3.1)	Revising as follows, the approved Aircraft Maintenance Programme (AMP) on the basis of which the operator or the owner ensures the continuing airworthiness of each operated aeroplane:		
			Incorporate the N ISB,	LG Main Fitting life limitation as specified in the	
			and		
		(3.2)	Complying with the of this AD.	e approved AMP as described in paragraph (3.1)	

EASA AD No.: 2012-0191R1
