

EASA	NOTIFICATION OF A PROPOSAL TO ISSUE AN AIRWORTHINESS DIRECTIVE
	<p>PAD No.: 14-036</p> <p>Date: 12 February 2014</p> <p>Note: This Proposed Airworthiness Directive (PAD) is issued by EASA, acting in accordance with Regulation (EC) No 216/2008 on behalf of the European Community, its Member States and of the European third countries that participate in the activities of EASA under Article 66 of that Regulation.</p>
<p>In accordance with the EASA Continuing Airworthiness Procedures, the Executive Director is proposing the issuance of an EASA Airworthiness Directive (AD), applicable to the aeronautical product(s) identified below. All interested persons may send their comments, referencing the PAD Number above, to the e-mail address specified in the 'Remarks' section, prior to the consultation closing date indicated.</p>	
Design Approval Holder's Name: CFM INTERNATIONAL S.A.	Type/Model designation(s): CFM56-5B and CFM56-7B engines
TCDS Number:	EASA.E.003, EASA.E.004
Foreign AD:	Not applicable
Supersedure:	None
ATA 05	Time Limits – Engine Stationary Parts – Life Limits / Mandatory Inspections
Manufacturer(s):	SNECMA, General Electric
Applicability:	<p>CFM56-5B engines, all models, all serial numbers.</p> <p>CFM56-7B engines, all models, all serial numbers.</p> <p>These engines are known to be installed on, but not limited to, Airbus A318, A319, A320 and A321 aeroplanes; and Boeing 737-600, -700, -800, -900 and -900ER aeroplanes.</p>
Reason:	<p>Stationary components were identified by CFM International S.A. (CFM) as life limited in service. Neither CFM56-5B Engine Shop Manual (ESM) nor CFM56-7B ESM contained instructions for calculation of remaining cyclic life for life limited engine stationary parts which were previously operated on a different engine type or model (configuration).</p> <p>This condition, if not corrected, could lead to operation of an engine stationary part beyond its technical life limit and consequent engine structural failure, possibly resulting in damage to the aeroplane and/or injury to the occupants.</p> <p>To address this potentially unsafe condition, CFM issued CFM56-5B ESM Temporary Revision (TR) 05-0223 and CFM-7B ESM TR 05-0163 to provide a method to determine the remaining life of each affected engine stationary part.</p> <p>For the reasons described above, this AD requires calculation of the remaining life of each affected engine stationary part and, depending on the calculation results, replacement or inspection of each part, as applicable.</p>
Effective Date:	[TBD: 14 days after final AD issue date]

<p>Required Action(s) and Compliance Time(s):</p>	<p>Required as indicated, unless accomplished previously:</p> <ol style="list-style-type: none"> (1) Within 12 months after the effective date of this AD identify each life limited stationary part installed on an engine which was previously operated in different engine model configuration. A review of engine maintenance records is acceptable to make these identifications, provided that the operational history of each life limited engine stationary part can be conclusively determined from that review. (2) If, during the identification as required by paragraph (1) of this AD, an engine stationary part is identified that has previously been operated in a different engine type or different engine model (including different configuration, thrust rating), within 12 months after the effective day of this AD, calculate the remaining life of each engine stationary part in accordance with the instructions of CFM56-5B ESM page block 05-12-00, as amended in accordance with TR 05-0223, or CFM56-7B ESM page block 05-12-00, as amended in accordance with TR 05-163, as applicable to engine type. (3) Depending on the result of the calculation as required by paragraph (2) of this AD, within the compliance time as defined in Table 1 of this AD, replace each affected part with a serviceable part, or inspect each part (including all applicable corrective actions, depending on findings) in accordance with approved maintenance instructions, as applicable. <p style="text-align: center;">Table 1</p> <table border="1" data-bbox="568 954 1423 1238"> <tr> <td>Engine type</td><td>Compliance time, whichever occurs later after the calculation as required by paragraph (2) of this AD</td></tr> <tr> <td>CFM56-5B (all Models)</td><td>Within 100 engine cycles, or before exceeding the calculated remaining life</td></tr> <tr> <td>CFM56-7B (all Models)</td><td>Within 50 engine cycles, or before exceeding the calculated remaining life</td></tr> </table> <ol style="list-style-type: none"> (4) From the effective date of this AD, installation on an engine of a used life limited engine stationary part that has previously been operated in a different engine type or different engine model (including different configuration, thrust rating) is allowed, provided that, prior to installation, the applicable remaining life of the engine stationary part is calculated as specified in paragraph (2) of this AD and, thereafter, each affected part is inspected or replaced, as applicable, before exceeding the calculated remaining life. 	Engine type	Compliance time, whichever occurs later after the calculation as required by paragraph (2) of this AD	CFM56-5B (all Models)	Within 100 engine cycles, or before exceeding the calculated remaining life	CFM56-7B (all Models)	Within 50 engine cycles, or before exceeding the calculated remaining life
Engine type	Compliance time, whichever occurs later after the calculation as required by paragraph (2) of this AD						
CFM56-5B (all Models)	Within 100 engine cycles, or before exceeding the calculated remaining life						
CFM56-7B (all Models)	Within 50 engine cycles, or before exceeding the calculated remaining life						
<p>Ref. Publications:</p>	<p>CFM56-5B ESM, as amended by TR 05-0223 dated 29 August 2013, CFM56-7B ESM, as amended by TR 05-0163 dated 29 August 2013.</p> <p>The use of later approved revisions of these documents is acceptable for compliance with the requirements of this AD.</p>						
<p>Remarks:</p>	<ol style="list-style-type: none"> 1. This Proposed AD will be closed for consultation on 12 March 2014. 2. Enquiries regarding this PAD should be referred to the Safety Information Section, Executive Directorate, EASA. E-mail: ADs@easa.europa.eu. 3.
