EASA	AIRWORTHINESS DIRECTIVE			
	PAD No.: 14-156			
* * *	Date: 23 October 2014 Note: This Proposed Airworthiness Directive (PAD) is issued by EASA, acting in accordance with Regulation (EC) No 216/2008 on behalf of the European Community, its Member States and of the European third countries that participate in the activities of EASA under Article 66			
of that Regulation. In accordance with the EASA Continuing Airworthiness Procedures, the Executive Director is proposing the issuance of an EASA Airworthiness Directive (AD), applicable to the aeronautical product(s) identified below. All interested persons may send their comments, referencing the PAD Number above, to the e-mail address specified in the 'Remarks' section, prior to the consultation closing date indicated.				
Design Approval H	lolder's Name:	Type/Model designation(s):		
AIRBUS		A330 and A340-200/-300 aeroplanes		
TCDS Number:	EASA.A.004, EASA.A.015			
Foreign AD:	Not applicable			
	Supersedure: This AD supersedes EASA AD 2012-0244R1 dated 25 January 2013, which superseded EASA AD 2012-0070 dated 25 April 2012, including the Correction dated 26 April 2012.			
ATA 29	Hydraulic Power – High Pressure Manifold Check Valves – Inspection / Modification			
Manufacturer(s):	Airbus (formerly Airbus Industrie)			
Applicability:	Airbus A330-201, A330-202, A330-203, A330-223, A330-223F, A330-243, A330-243F, A330-301, A330-302, A330-303, A330-321, A330-322, A330-323, A330-341, A330-342 and A330-343 aeroplanes, all manufacturer serial numbers (MSN) except those on which Airbus modification 203972 has been embodied in production, and			
Airbus A340-211, A340-212, A340-213, A340-311, A340-312 and A3 aeroplanes, all MSN.		12, A340-213, A340-311, A340-312 and A340-313		
Reason:	An A330 operator experienced a yellow hydraulic circuit low level due to a loose check valve, Part Number (P/N) CAR401. During the inspection on the other two hydraulic systems, the other three check valves P/N CAR401 were also found to be loose with their lock wire broken in two instances. Airbus A340 aeroplanes are also equipped with P/N CAR401 high pressure manifold check valves.			
	Additional cases of P/N CAR401 check valve loosening have been reported on aeroplanes having accumulated more than 1 000 flight cycles (FC). The check valve fitted on the Yellow hydraulic system is more affected, due to additional system cycles induced by cargo door operation.			
		cted and corrected, could result in hydraulic leaks, ss of all three hydraulic systems and consequent plane.		

	To address this unsafe condition, EASA issued Emergency AD 2009-0223-E to require an inspection programme to detect any check valve loosening and, if necessary, to apply the applicable corrective actions.
	EASA AD 2010-0145, which superseded EASA EAD 2009-0223-E retaining its requirements, was issued to expand the applicability to the newly certified models A330-223F and A330-243F.
	Prompted by further reported in-service events of check valve P/N CAR401 loosening before reaching the threshold of 700 FC, EASA AD 2011-0139, which superseded EASA AD 2010-0145, retaining its requirements, was issued to:
	 extend the requirement to identify the P/N CAR401 check valves to all aeroplanes, and
	- reduce the inspection threshold for aeroplanes fitted with check valve P/N CAR401, either installed in production through Airbus modification 54491, or installed in service through Airbus Service Bulletin (SB) A330-29-3101 or Airbus SB A340-29-4078.
	EASA AD 2012-0070, which superseded EASA AD 2011-0139, retaining its requirements, was issued to require an increased torque value of the check valve tightening and High Pressure (HP) manifold re-identification.
	Since EASA AD 2012-0070 was issued, additional in-service events have been reported on aeroplanes fitted with check valves on which the increased torque value had been applied. Based on those events, it has been concluded that the action to re-torque the check valves with an increased value is not a satisfactory terminating action for addressing the issue of those check valves.
	To address that, EASA issued AD 2012-0244 which partially retained the requirements of EASA AD 2012-0070, which was superseded. Additionally, for aeroplanes equipped with P/N CAR401 on which the increased torque value had been applied, EASA AD 2012-0244 required repetitive inspections of the check valves and HP manifolds. Finally, EASA AD 2012-0244 also required application of a lower torque value when a check valve P/N CAR401 is installed on an aeroplane.
	Note: the reporting and the torque value increase requirements for check valves P/N CAR401 of EASA AD 2012-0070 are no longer part of EASA AD 2012-0244.
	EASA AD was revised to clarify which actions are required for P/N CAR401 check valves, depending on applied (or not) torque value.
	Since EASA AD 2012-0244R1 was issued, Airbus developed an improved check valve P/N CAR402, which is embodied in production through Airbus modification 203972, and in service through associated Airbus SB A330-29-3125, or Airbus SB A340-29-4096, as applicable to aeroplane type. In addition, these SBs provide instructions about the torque value (between 230 and 250 Nm) and re-identification of HP manifolds after check valve P/N CAR402 installation.
	For the reasons described above, this AD retains the requirements of EASA AD 2012-0244R1, which is superseded, and requires the installation of check valves P/N CAR402 as terminating action to the repetitive inspections.
Effective Date:	[TBD: 14 days after final AD issue date]

Required Action(s)	Required as indicated, unless accomplished previously:		
and Compliance Time(s):	Re-statement of the requirements of EASA AD 2012-0070 and EASA AD		
Time(s).	2012-0244R1:		
	(1) For aeroplanes equipped with P/N CAR400 check valves, or equipped with P/N CAR401 check valves on which the increased torque value of 400 Nm <u>has never been applied</u> :		
	Within 900 Flight Hours (FH) after 08 August 2011 [the effective date of EASA AD 2011-0139], accomplish a visual inspection of the check valves on Blue, Green and Yellow hydraulic systems to identify their P/N in accordance with the instructions of Airbus SB A330-29-3111 Revision 02, or Airbus SB A340-29-4086 Revision 02, as applicable to aeroplane type.		
	(2) If during the inspection as required by paragraph (1) of the AD, it is identified that check valves P/N CAR401 are installed on all three hydraulic systems, before next flight, inspect the yellow and blue system check valves and, depending on findings, apply the applicable corrective actions, before next flight, in accordance with the instructions of Airbus SB A330-29-3111 Revision 02, or Airbus SB A340-29-4086 Revision 02, as applicable to aeroplane type.		
	(3) Within 900 FH after accomplishment of the actions as required by paragraph (2) of this AD, and, thereafter, at intervals not to exceed 900 FH, perform the inspection programme on green, yellow and blue system check valves and, depending on findings, apply the applicable corrective actions, before next flight, in accordance with the instructions of SB A330-29-3111 Revision 02, or SB A340-29-4086 Revision 02, as applicable to aeroplane type.		
	(4) If during the inspection as required by paragraph (1) of the AD, it is identified that check valves P/N CAR401 are not installed on all three hydraulic systems, no immediate further action is required, except if a check valve P/N CAR400 is replaced with a check valve P/N CAR401; before next flight after that replacement, the aeroplane configuration must be inspected to determine if all three hydraulic systems are equipped with check valves P/N CAR401, in which case the requirements of paragraphs (2) and (3) of this AD must be accomplished.		
	(5) Inspections and corrective actions accomplished before 08 August 2011 [the effective date of EASA AD 2011-0139], in accordance with the instructions of Airbus All Operators Telex (AOT) A330-29A3111 at Original issue or Revision 01, or AOT A340-29A4086 at Original issue or Revision 01, as applicable to aeroplane type, are acceptable to comply with the initial inspection programme as required by paragraph (2) of this AD. After 08 August 2011 [the effective date of EASA AD 2011-0139], all inspections and corrective actions, as required by paragraph (3) of this AD, must be accomplished in accordance with the instructions of Airbus SB A330-29-3111 Revision 02, or Airbus SB A340-29-4086 Revision 02, as applicable to aeroplane type.		
	(6) For aeroplanes equipped with P/N CAR401 check values on which the increased torque value of 400 Nm <u>has been applied</u> :		
	Note: This increased torque value was applied with Airbus modification 201384 in production, or through Airbus SB A330-29-3119 or Airbus SB A340-29-4091, as applicable, in-service.		
	(6.1) Within 1 000 FH after 29 November 2012 [the effective date of EASA AD 2012-0244 at original issue], and, thereafter, at intervals not to exceed 900 FH, visually inspect the green, blue and yellow high pressure manifolds and check valves P/N CAR401 in accordance with the instructions of Airbus AOT		

original issue], at each replacement of a check valve with a check valve P/N CAR401, apply a torque of 141 to 143 Nm (103.98 to 105.45 lbf.ft) during installation on an aeroplane. New requirements introduced by this AD: (9) Within 36 months after the effective date of this AD, modify the green, blue and yellow high pressure hydraulic manifolds by replacing each check valve P/N CAR401 with an improved check valve P/N CAR402 ii accordance with the instructions of Airbus SB A330-29-3125, or Airbus SB A340-29-4096, as applicable to aeroplane type. (10) Modification of an aeroplane as required by paragraph (9) of this AD constitutes terminating action for the repetitive inspections required by this AD. (11) After modification of an aeroplane as required by paragraph (9) of this AD constitutes terminating action for the repetitive inspections required by this AD. (11) After modification of an aeroplane as required by paragraph (9) of this AD, do not install a check valve P/N CAR401 on that aeroplane. Ref. Publications: Airbus AOT A330-29-3111 original issue dated 02 September 2009, or Revision 01 dated 08 October 2009. Airbus SB A330-29-3111 Revision 02 dated 23 June 2011.
